August 2004

To All Building Information Book Recipients,

The following Building Information Book is printed and distributed each year by the Facilities Planning and Construction Division. The information contained in this book is derived from the "official" University of Florida Facility Inventory and is issued in this form for general information purposes only. For the latest information you can visit the Facilities Planning & Construction Space Management website at http://www.ufspace.ufl.edu or contact us directly.

The book contains both an alphabetically and a numerically sorted list of all numbered University of Florida buildings with the exception of buildings located at IFAS Research Centers outside of Alachua County and buildings leased by the University. Also included are grid area maps for the main campus and surrounding areas. The location code in the fifth column of each list corresponds to one of these maps indicating a general geographical area where the building is located.

If you have any questions regarding this resource, please contact Mr. David Heather by campus mail at: PO Box 115050, or by telephone at: 294-0087.

Sincerely,

Carol J. Walker
Director, Facilities Planning & Construction

LOCATION CODE LEGEND

The location codes listed and described below are intended to be a comprehensive listing of the location codes found in the Building Information List. Location codes beginning with the numbers 1 through 4 indicate areas shown on the UF Campus Map while location codes beginning with the numbers 5 through 9 indicate areas found outside the limits of the map. A small-scale version of the UF Campus Map with a location grid is included in this section of the book to assist the user by showing how the map is subdivided into areas. To locate a particular building within one of these campus areas, the user is referred to individual area maps that follow the campus map in alphanumeric order. (Please note that several of the area maps, namely 2A, 2B, 2C, and 3B, are not subdivided into quadrants as shown on the campus map.) To locate buildings in areas found outside the limits of the campus map, the user must rely on the location description given below and/or other sources.
