Lists of Plants on the Landscape Plant Propagation Database on IFAS/VAX¹

Dewayne L. Ingram²

Propagation information is available on the following plants in the Landscape Plant Propagation Information Retrieval System (LPPI) accessible through the Ornamental Horticulture Submenu of the IFAS-VAX Menu system. LPPI is an interactive computer application developed for retrieval of propagation information on several hundred landscape plants. LPPI has been written in S1032, a database manager. The user can list plants in the database and retrieve information on individual plants by entering all or part of the scientific or common name. The database (Table 1) contains general descriptive information on each plant, the primary and secondary means of propagating the plant and important techniques to consider in each suggested propagation method. Possible propagation methods include cuttings, seed, layering, grafting and budding, and division. The information on each plant may not be complete but reflects information collected to date. The database will be continually updated as additional information is obtained. A more detailed description of LPPI is presented in Florida Cooperative Extension Circular No. 760, "Landscape Plant Propagation Information Retrieval System."
