

it extends from the Baker County line eastward to within a mile of Marietta, where it is bordered by a mile-wide fringe of the Penholoway terrace.

*Escambia County*—The band of Wicomico terrace lies 2 to 5 miles inland at Pensacola and extends northward as an estuarine reentrant at least to the head of Escambia Bay.

*Marion County*—There are extensive areas in Marion County that lie within the limits of altitude (100-70 feet) of the Wicomico terrace, and parts of them were probably submerged during the Wicomico time. The entire region has been much altered by solution of limestone beneath the surface.

*Nassau County*—The Wicomico terrace occupies the part of Nassau County that lies west of a line connecting Hilliard with Crawford, where it is separated from the broad Pamlico terrace by a narrow band of Penholoway terrace.

*Okaloosa County*—A narrow band lying within the limits of altitude of the Wicomico terrace in Okaloosa County appears to have been modified by the growth of dunes and probably also by subterranean solution. The band extends along the boundary between the Mary Esther and the Holt quadrangles. It averages about one mile in width.

*Putnam County*—The map of the Interlachen quadrangle shows a 2- to 5-mile-wide band of Wicomico terrace lying east of the Baywood Promontory (Cooke, 1939c, p. 44). Much of the terrace is very flat, but it is bordered by a steep rise to the Baywood Promontory on the west and by a steep downward slope to the Talbot terrace on the east. The Penholoway terrace is poorly developed and locally absent there.

*Santa Rosa County*—The narrow band of Wicomico terrace shown on the map of the Holley quadrangle adjoins the Pamlico terrace north of East Bay and East Bay Swamp. The rise to it is steep, and the Wicomico has been somewhat dissected.

*Wakulla County*—The southwest quarter of the Tallahassee quadrangle, including parts of Wakulla and Leon Counties is occupied by a level expanse of Wicomico terrace, which extends southwestward almost to Ochlockonee River.
