A few doses of this remedy will invariably cure an ordinary attack of diarrhoea.
It can always be depended upon, even in the more severe attacks of cramp colic and cholera morbus.
It is equally successful for summer diarrhoea and cholera infantum in children, and is the means of saving the lives of many children each year.
When reduced with water and sweetened it is pleasant to take.
Every man of a family should keep this remedy in his home. Buy it now.
PRICE, 25c. LARGE SIZE, 50c.

Very Serious

It is a very serious matter to ask for one medicine and have the wrong one given you. For this reason we urge you in buying to be careful to get the genuine—

THE FORD'S
BLACK-DRAUGHT
Liver Medicine

The reputation of this old, reliable medicine, for constipation, indigestion and liver trouble, is firmly established. It does not imitate other medicines. It is better than others, or it would not be the favorite liver powder, with a larger sale than all others combined.

ELECTRICITY OR ANNIHILATION

Gruesome Prophecy of a German Man of Science as to What Our Extravagance Is Bringing Us To

Washington, D. C., May 22.—A New York dispatch to the Post says: Dr. Charles P. Steinmetz, professor of electrical engineering at Union College, Schenectady, and consulting engineer of the General Electric Company, predicts that the present generation will see the exhaustion of our supply of anthracite. The natural course then will be to rely upon our deposits of soft coal for protection against freezing, but the government in Dr. Steinmetz's opinion, will be obliged to prohibit this or the air we breathe will become permeated with poisonous gases. The hope of future generations for life, as Dr. Steinmetz sees it, lies in electricity.

The United States that is to come will be a country entirely devoid of its present river beauty. The rivers of the future will be merely a succession of sluggish lakes, with electric power stations in between. All the little streams will have been wiped out, and their combined strength conveyed into the great bodies of water that are to supply the heat, light and power of the future.

But even the husbanding of all our water power will not be sufficient. There must be economy along other lines. The energy of Old Sol himself must be trapped and saved. Our building methods will have to undergo a change. Provision will have to be made for the utilization of the sun's rays in the heating of homes. That's probably where glass roofs will come in.

Only Bachelors in Cities

Dr. Steinmetz also sees in his mind's eye the city of the future—a collection of office buildings, factories and bachelor apartments. All the married men with their families will have moved to the country. The development of the uses of electricity is already bringing this change about.

Dr. Steinmetz took this look into the future in a lecture at the American Institute of Electrical Engineers. His subject was "The Future of Electricity." He said that the handicap against the use of electricity now is its high cost of production. That high cost is occasioned largely by the irregular nature of its distribution. Electricity supplied for twenty-four hours to a mill can be obtained at 1 cent per kilowatt hour, whereas the electricity used for lighting purposes costs ten times as much. The hope of the future for economy, in Dr. Steinmetz's opinion, is the organizing of electrical power—so that the supply will go out evenly over the twenty-four hours, and not in a haphazard and unsystematic way, as at present.

"The cost of production," said Dr. Steinmetz, "depends on the distribution of the 'loads,' and when they can be evened out over the twenty-four hours in a systematic way the end will have come for kerosene and gas as illuminants."

Then No Kitchen Range

The same conditions will usher in the age of cooking by electricity, if the coal supply hasn't given out before then.

"The time will come," said the professor, "when we will have no more coal, and it is not far in the future. Anthracite will not last long. Many of us who are here will be alive when the last is gone. Many of us will see the time when there is only soft coal. Some of you may see the time when soft coal is exhausted, but probably not, for there is a supply of this even in Greenland's icy mountains. But, nevertheless, we can see the end, and when we approach it what are we going to do to keep from freezing? That seems to be the problem that the next generation will have to meet, and maybe we ourselves.

"But the nation will also have to wake up to the problem of the poison that escapes in the burning of soft coal. Look out around Pittsburgh, where we see the pines dying. They have been poisoned. The evergreen tree, like us, has only onset of lungs. Other trees get a new set every year. If you go through all those valleys where the great steel plants are you will find never a pine. It may be even before the soft coal is gone that we may have to drop its use; that we will wake up to the viciousness of the practice of burning it.

"And what does this mean? It means that we must use electrical power.

"What we get today of our real water power is a mere nothing. No attempt is made to get the enormous power that goes to waste in the spring floods. Look at the enormous unused power in the little creeks and rivulets. New methods will have to be devised for collecting the joint power of all of these creeks and rivers. That is what we will have to do when we face the possibility of freezing."

Exhaustion of the Soil

But in Dr. Steinmetz's opinion there is a vaster problem facing the nations of the world—a problem which only electricity can solve. That has to do with the exhaustion of the soil of this and other countries. It's a cardinal principle that you's got to put back into the soil what is taken out if you are going to keep the soil's capital intact. That hasn't been done in this or any other country. New England, for instance, is no longer a farming country. The capital there, according

to Dr. Steinmetz, has all been taken from the soil. The time will come, too, when the West will be exhausted, and we can go no further.

"We will face the Pacific and beyond that," said the speaker, "the millions of China."

Salt-peter Nearly Gone

The attempt to fertilize the ground put back, Dr. Steinmetz held, only a small proportion of what was taken out, and it would be only about ten years when the supply of salt-peter, used in fertilizer, will have been exhausted.

"When the capital of our farms," said the speaker, "is exhausted, we will have to produce fertilizer. A large part of what we take out of the soil we dump into the rivers as sewage. Billions of dollars of capital is carried down them into the ocean. But we cannot hope to utilize all of this.

"Electrical power is the only means that will combine the elements of the aid necessary for a fertilizer. That process we are just teaching—the production of fertilizer from the air. It is not practical yet; the cost of electrical power is too great. The fertilizer is produced only in Sweden, where electrical power is extremely cheap. Every year we can see the necessity of restoring the capital to the farm. That situation will have to be met within our lifetime."

FACING DEATH WITHOUT FEAR

A New York Man Receives His Sentence to Hydrophobia Without Flinching

New York, May 22.—William H. Marsh, an aged wealthy man, when told yesterday that he undoubtedly would die within a week of hydrophobia, calmly turned away with the remark that he would be ready when the summons came. Without a tremor he walked down the steps of the Pasteur Institute, stepped into his carriage and started for his home in Brooklyn.

"You waited too long," the surgeons at the institute told him, after they had made their examination. "Our treatment cannot help you. You have hydrophobia."

"How much time do you give me?" he asked.

"Not long," said the physician; "probably not more than four or five days."

"Well," he said, "if I have to go I can face it. My business is in shape and a day or two will see it all settled. I'd rather die some other way, but I'm not afraid."

Mr. Marsh dressed the wounds of his pet spaniel which had been bitten by a strange dog. The spaniel licked his hand in gratitude and Mr. Marsh was infected through a small scratch on one of his fingers. The spaniel died of hydrophobia.

KENDRICK

Rev. J. C. Graham filled his regular appointment here last Sunday to an appreciative congregation.

Mr. C. C. Priest attended the picnic at Lynne last Thursday.

Messrs. E. C. McCleod, S. B. Brooks and W. E. Nix and C. I. Grace and family attended the picnic at Pine last Friday.

Cantaloupes have begun to go forward.

Mr. and Mrs. B. C. Webb went up to Gainesville Wednesday to visit friends for a day or two.

Mr. O. G. Olin was quite painfully burned last Thursday while attempting to save his neighbor's fence from being burned by forest fire.

The first primary has come and gone. Quite a little interest was manifested.

Mr. E. J. Nix came up from Herdo last Friday and returned Sunday.

The following young people, chaperoned by Mrs. W. T. Richey, spent the day Thursday at Orange Lake: Misses Hattie and Clara Sims, Beulah Carlington and Alta Grace; Messrs. Bill, Stuart and Vernon Knoblock, Mr. Teuton and Mr. Adkinson of Martin.

GOOD FOR EVERYBODY

Mr. Norman R. Coulter, a prominent architect, in the Delbert Building, San Francisco, says: "I fully endorse all that has been said of Electric Bitters as a tonic medicine. It is good for everybody. It corrects stomach, liver and kidney disorders in a prompt and efficient manner and builds up the system." Electric Bitters is the best spring medicine ever sold over a druggist's counter; as a blood purifier it is unequalled. 50c. at all drug-stores.

GOOD WORDS FOR CHAMBERLAIN'S COUGH REMEDY

People everywhere take pleasure in testifying to the good qualities of Chamberlain's Cough Remedy. Mrs. Edward Phillips of Barclay, Md., writes: "I wish to tell you that I can recommend Chamberlain's Cough Remedy. My little girl, Catherine, who is two years old, has been taking this remedy whenever she has had a cold since she was two months old. About a month ago I contracted a cold myself, but I took Chamberlain's Cough Remedy and was soon as well as ever." This remedy is for sale by all druggists.

R. C. Davis & Co., of Jacksonville, will sell any make of second-hand typewriter, upon easy terms if desired.

THE GLOBE

5 Specials

FOR

Saturday and Monday

May 23rd and 25th

Read this carefully and study it well and you will at once perceive your chance of saving good money is only by dealing at the Globe. The Globe is always ready to please its customers, and always ready to cater for business by offering every week some special inducements.

For this Saturday and Monday our offerings are of immense value to our lady and gentleman customers and the public at large.

A VISIT TO THE GLOBE WILL CONVINC YOU OF YOUR SAVING
