SCROFULA
The Blighting Disease of Heredity.

In many respects Scrofula is an unknown disease. It is only about twenty years ago that any attention has been paid to this terrible disease. It is simply a form of tuberculosis which attacks the glands of the body, and produces a swelling of the neck and throat. The disease is very common among the very poor classes, and it is believed that it is also common among the lower classes of the community in the United States. It is caused by the same bacillus that causes tuberculosis, and it is just as dangerous if not more so.

These glands become infected with the bacillus, and it is this infection that makes the disease. The glands become enlarged and hard, and they take on a yellowish color. The disease is very painful, and it is often accompanied by fever and headache.

The treatment of Scrofula is surgical, and it is important that the disease be treated as soon as possible. The surgical treatment consists of removing the infected glands, and this is usually done under general anesthesia.

There is no known cure for Scrofula, but the disease can be controlled by proper medical care. The patients should be kept in a clean and dry place, and they should have plenty of fresh air and sunshine. They should also be given a proper diet, and they should be kept well hydrated.

The cost of treatment is usually very high, and it is important that patients be able to afford this treatment. There are no known cases of successful treatment of Scrofula.

It is important that the public be aware of this disease, and that they be made aware of its dangers. It is also important that the government take steps to prevent the spread of this disease, such as by providing proper medical care to those who need it.

SAVE THE CHILDREN.

Many children in the United States are suffering from this disease, and it is important that the government take steps to prevent the spread of this disease. The government should provide proper medical care to those who need it, and they should also provide education about the dangers of Scrofula.

We are all responsible for the health and well-being of our children. Let us work together to prevent the spread of Scrofula and to ensure that all children have the opportunity to live healthy and productive lives.
