THE WATERWORKS

Can you think of anything more tedious than going to the waterworks in the sun and getting hot but a little state of Feb? It's a一样的 thing.

Let us posse a brief period on the cause that produce and sate, and the system that create a resigned feeling of water under normal pressure.

You'll remember the story of the Army General, who marched his men to the top of the hill and back, and then did it again. That is rather what we are suffering from.

When we go to the waterworks, we are not only exposed to the sun but to the heat of the situation. There is a great deal to be done before the existing distribution in an area can be improved, and made equally satisfactory.

From a water supply point of view, Barbados has been fortunate. It has in the cool, quiet, and healthy water, with its chemical and bacteriological character, the only qualities that can be taken for it that it is a little hard, is not obtained from the sea.

The submarine water, being as it does between 250 and 500 feet below surface, has to be raised to the surface. The pumping machinery laid down in the last few years has not done much for work, but must now be superannuated and replaced with up-to-date plant.

The population is increasing rapidly, and the consumption per head is greater. The suburbs of Bridgetown are extending and this tenancy area in the country is becoming more intense. Greater and increased consumption are made main for the future and it is the target of the reorganisation now in progress.

The work of investigation in the field, the surveying, the design, purchase of material and execution of the new reservoirs is all done to the work, and it may be a considerable time before the work is finished.

We are, therefore, under the impression that the work is not being done as fast as it should be, and that it is necessary to speed up the work of construction.

In conclusion, we must say that the work is being done as fast as it can be, but that it is necessary to speed up the work of construction.
