IFAP Priorities and Select Activities

- Promoting the preservation of documentary heritage through the MOW
- Supporting the development of preservation standards and management tools
- Strengthening the capacity of librarians and archivists for digitization
- Supporting good records management in governments
- Collaborating to address technical and cost challenges of digital storage
- Collaborating to increase awareness of importance of information preservation
- Sustaining and promoting UNESCO’s open training platform
- Supporting the creation of linguistically and culturally diverse content
- Promoting the development of resources accessible to people with disabilities
- Promoting the development and use of automated translation tools
- Supporting the development of “open” information processing tools, interoperability standards, metadata, content ordering, interfaces to digital collections, search tools and preservation tools
dLOC Collaboration

- 26 Partners – Caribbean, Europe and US

- Access to Caribbean Resources

Digital Content Management System fully open source and developed at the University of Florida Digital Library Center

Digital Library of the Caribbean

SobekCM: Digital Content Management System

ABOUT SOBEKCM

SobekCM is the software engine which powers both the University of Florida Digital Collections (UFDC) and the Digital Library of the Caribbean (dLOC) digital repositories.

SobekCM allows users to discover online resources via semantic and full-text searches, as well as a variety of different browse mechanisms. For each digital resource in the repository there are a plethora of display options, which may be selected by an appropriately authenticated use. This repository includes online metadata editing and online submissions in support of institutional repositories.

This software was developed at the University of Florida Libraries by Mark Sullivan, with much input from the UF Digital Library Center.

SobekCM is released as open source software under the GNU GPL license and can be downloaded from the SobekCM Software Download Site.
dLOC Technology
Online Metadata Creation and Editing

Open Source, Open Access Tools (with online support and training) for Partner Generated Metadata

All dLOC records are associated to a METS file that describes descriptive, administrative, and structural information relevant to its display and long-term preservation.
