

## Varieties of Vegetables with Resistance to Disease.<sup>1</sup>

P.D. Roberts and K.L. Pernezny.<sup>2</sup>

A list of vegetable varieties with resistance was compiled for bean, broccoli, carrot, cabbage, cucumber, lettuce, melons, pepper, squash, sweet corn, tomato, and watermelon. This information was obtained from the seed companies, primarily through catalogues. The seed company or sales representatives should be contacted for further information on specific varieties such as horticultural characteristics or type of resistance.

A key to abbreviations of virus disease is included at the top of Table 1. Entries with an \* are tolerant and more information may be obtained from the seed company.
