

R: That's a side \_\_\_\_\_

P: Uh huh.

R: And that's \_\_\_\_\_ not to plant them then, but that's a good sign it'll be a lot of food. In other words, you can just \_\_\_\_\_ all the time.

P: If you plant on the twin side.

R: That's right, on the twin side, just the more food you will have. Everbody says \_\_\_\_\_ that follows the moon \_\_\_\_\_

That don't hold true with me everytime, because I get a plant by the moon where there's a sign, the moon and the signs won't correspond from one year to the other.

P: Uh huh.

R: In other words, they'll be differences. In other words, maybe the moon is full, the signs will be in one part this year and next year if it's full it will be in a different places the same month of the year, so, I go by the moon. I'll tell you, I can plant something like that after the moon's full, \_\_\_\_\_ peas. Now, \_\_\_\_\_ that's a root crop, or potatoes, we've always knowed, been told to plant them in dark nights.

P: When there's no moon.

R: No moon.

P: Uh huh.

R: No moon. After that the moon will decrease, they ain't no moon after it's full, most anytime after the moon is full, two or three days, then on till it's \_\_\_\_\_ is a good time to plant anything.

P: Uh huh.

R: But....

P: But not things like potatoes and....

R: No, that's, it's a bad time to plant potatoes. Well, now, potatoes, any root crop in the decrease of the moon is the time to plant them.

P: Are you supposed to plant them at night or just full moon?

R: No, you just plant.... (laughter)

P: I'd get out there at night....
