

CONTENTS

	<i>Page</i>
1.0 Introduction	1
2.0 Evapotranspiration Concepts	4
2.1 Climate Dependence	4
2.1.1 Evapotranspiration and the Energy Budget	4
2.1.2 Potential Evapotranspiration	6
2.2 Surface Dependence of Evapotranspiration	7
2.2.1 Influence of Plant Canopy and Physiological Stage of Growth on Actual Evapotranspiration	8
2.2.2 Seasonal Evapotranspiration of Crops	9
2.3 Techniques Used to Calculate Potential Evapotranspiration	10
2.3.1 Penman Method	10
2.3.2 Pan Evaporation Method	14
2.3.3 Thornthwaite Method	14
2.3.4 Blaney-Criddle Method	15
2.3.5 Modified Blaney-Criddle Method using Solar Radiation	15
2.3.6 Stephens-Stewart Method	17
2.4 Potential Evapotranspiration for Various Regions in Florida	17
3.0 Experimental Verification of Evapotranspiration	20
3.1 Basin-Wide Water Budget	21
3.1.1 Annual Water Budget	21
3.1.2 Monthly Water Budget	23
3.2 Experimental Plot Water Budget Verification	27
3.2.1 Monthly Water Budget	27
3.2.2 Seasonal Crop Evapotranspiration	30
3.3 Crop Coefficients	33
4.0 Application of Evapotranspiration Concepts to Irrigation Management	38
4.1 Irrigation to Prevent Crop Yield Reductions	38
4.1.1 Dry Matter Yield	38
4.1.2 Grain Yield	39
4.2 Effective Rainfall	44
4.3 Irrigation Requirement	47
4.4 Example of Irrigation Management Concepts for Humid Regions	49
5.0 Summary	52
Appendix I. Notation	55
Appendix II. U.S. Customary to SI Conversion Factors	59
References	61
