

## LIST OF TABLES

<i>Table</i>		<i>Page</i>
1	Cloudless sky daily solar radiation received at earth's surface, averaged for each month for three latitudes .....	12
2	Pan coefficients for Class A pan for different groundcover, levels of mean relative humidity, and 24-hour wind .....	16
3	Application of Penman method to calculate free water evaporation and monthly potential evapotranspiration for three locations in Florida .....	18
4	Calculated seasonal potential evapotranspiration by Penman method for three locations in Florida .....	19
5	Comparison of several long-term basin-wide water budgets on an annual basis .....	22
6	Average monthly climatological data for the Belle Glade, Florida, weather station .....	24
7	Monthly evapotranspiration estimated by different methods for the Everglades Agricultural Area for 19 years .....	25
8	Evapotranspiration deviation between water budget data and model predictions for the Everglades Agricultural Area .....	26
9	Water budget estimates of monthly evapotranspiration for citrus, pasture, sugarcane, rice, and peaches for various locations in Florida .....	29
10	Average monthly effective rainfall as related to mean monthly rainfall and average monthly consumptive use .....	46
11	Example predictions of effective rainfall and irrigation requirements for the Everglades Agricultural Area, using average weather conditions from 1924 to 1975 .....	48
