

## ACKNOWLEDGMENTS

A study of this type requires the advice, assistance and cooperation of a large number of people. Although space does not permit the mention of all who were helpful, particular recognition is accorded the following individuals whose contributions were of singular importance to the success of the study:

### MANAGEMENT AND PERSONNEL OF THE AMERICAN STORES COMPANY, PHILADELPHIA, PENNSYLVANIA

- Mr. H. D. Williamson, manager of produce operations, who evaluated the initial request for the cooperation of his firm and spearheaded the movement to make facilities available.
- Mr. Paul V. Cupp, then vice-president in charge of sales and now president, who saw the importance of the work to the Florida citrus industry and, in the face of the many adversities anticipated when the study was being planned, gave the final permission for it to be conducted in stores under his jurisdiction.
- Mr. Earl L. Zeigler, produce supervisor, who was responsible for liaison between the researchers and his company and unflinchingly gave the study his enthusiastic support and invaluable assistance.

The authors are also most grateful for the courtesy, patience, sympathy and understanding of the following personnel of the retail stores in which the study was conducted:

Dominick Gioscio, Thomas Redding, Mrs. Mary Alice Roberts, Louis Colvell, Rudolph Sandhoff, John Szalay, David Maze, Edward Bossio, Robert Irwin, Richard Denney, John McCormack, Harry Burness, George and Clifton Frake and Thomas Clark.

### OTHERS

- Dr. R. L. Anderson and Dr. H. L. Lucas, Department of Experimental Statistics, North Carolina State College, developed the experimental design used in the study and rendered valuable advisory assistance in the preliminary phases of the analysis.
- Mr. W. G. O'Regan, Department of Agricultural Economics, University of Florida, supervised the statistical analysis and gave freely of his excellent advice and assistance during all phases of the work.
- Dr. H. G. Hamilton, Head, Department of Agricultural Economics, University of Florida, bore the brunt of the administrative burden which the study created.

To these, and to many others, the authors are deeply grateful.
