**SHELL X-100 MOTOR OIL**

Do you notice the wear you see, attacking your engine even though your car is standing off in the garage? You can be sure and take a note, after a long drive—but if your oil goes off duty there will soon be trouble!

For as the engine cools, moisture, acids, and other harmful products of combustion form while the engine is running, condense on the metal surfaces. Only a film of oil protects these surfaces from attack by acid and the rusting and corrosion which they would inevitably cause. Cold corrosion is, in fact, one of the constant and most damaging of all kinds of engine wear.

**SHELL X-100** Motor Oil fights this form of wear, because it does not drain away from the cylinder walls, however long the car stands standing. Its stability, such that it keeps its working surfaces, safeguarding them against corrosion, ensuring that whether you take your car out tomorrow or after a lapse of weeks, the engine will be in as good condition as when you switched it off today.

**SHELL X-100** will mix with any mineral oil which is already in the sump, but to get the best and quickest results, DRAIN, FLUSH, AND REFILL WITH SHELL X-100

**Detergent** · **Stable** · **Protective**
