From the top of Boggy Peak in Antigua one can see a dozen islands on a clear day. They are Antigua itself, Barbuda, St. Kitts, Nevis, Montserrat, Redonda, Guadeloupe, Marie Galante, Guadeloupe Island, Saba, and Saba Island.

This article is confined to only one of the twelve islands visible from the highest point in Antigua, namely Montserrat. It is rather interestingly a volcanic island and is built of basalt rock. This is typical of the rocks of the Lesser Antilles.

From the summit it is possible to see the island which is represented in the picture on page six. The summit is occupied by a mountain peak which rises to a height of 1,800 feet. The peak is nearly covered by a large forest which is largely composed of pine trees.

The mountain is traversed by a bridle path which leads to the top of the hill. The path is well-marked and is easy to follow. It is, however, a hard climb and requires some effort to reach the top of the mountain.

The summit is a magnificent view point. From the top of the mountain one can see the islands of the West Indies in the distance, and the mountain itself is surrounded by a dense forest.

The island is about 6 miles long and 3 miles wide, and is surrounded by a beautiful blue sea. The land is comparatively low and much of it is covered by a dense forest.

One of the most interesting features of the island is a large lake which is situated in the center of the island. The lake is about 2 miles in diameter and is surrounded by a thick forest.

The lake is fed by a large river which rises in the mountains and flows through the forest to the sea. The river is about 10 miles long and is one of the most beautiful rivers in the world.

The island is also famous for its beautiful beaches. There are three main beaches on the island, namely the South Beach, the West Beach, and the North Beach. These beaches are all excellent for swimming and sunbathing.

The island is also famous for its beautiful gardens. There are several large gardens on the island, and these gardens are all well-maintained and are full of beautiful flowers.

The island is also famous for its beautiful churches. There are several large churches on the island, and these churches are all well-maintained and are decorated with beautiful murals.

The island is also famous for its beautiful dolerite. Dolerite is a type of volcanic rock which is found in many parts of the world. The dolerite of Montserrat is one of the most beautiful and is extensively used for building and ornamentation.
